

Embedded Software Engineer

CREADIS IS LOOKING FOR AN EMBEDDED SOFTWARE ENGINEER IN KRAKOW, POLAND

Become part of a dynamic and growing company

Due to our expansion in Poland CREADIS is now looking for an Embedded Software Engineer for a newly established position. You will have the possibility to influence the position and make a great impact regarding our organization in Poland.

CREADIS Sp. z o.o. is established in Poland as a natural expansion of the business headquartered in Denmark and we have great ambitions and expectations to our growth in Poland. In total, we employ more than 500 dedicated engineers across 12 offices in Denmark, Germany, the US, Poland and Ukraine.

DIS applies advanced technology to develop new products, processes and production equipment. DIS is an innovative and fast growing engineering and consultancy business that delivers technology and business results to a variety of industries, in an expanding global footprint. We have a complete skillset to solve mechanical, electronics, software, project management, electrical and automation projects.

Leave your mark on the future solutions

As a Project Engineer at CREADIS Sp. z o.o. you will get an independent and varied work day with professional challenges matching your skills. You will be involved in small and large development projects and you will be responsible for project implementation in close dialogue with our customers. Your tasks will among others be to participate in development projects within the field of embedded engineering, create software architecture, design modules and implement features in all layers of embedded software. Also, you will participate in test from unit test to final validation, prepare documentation as required by the project and the customer. You will also be responsible for solving technical issues and bugs.

Your profile

We require that you hold a relevant bachelor or master's degree in Computer Systems and Software (or similar) combined with several years of experience from a similar position. We expect that you have a high knowledge and strong skills within embedded software in general both with regards to processor systems and good professional programming practice. As a person you should be open-minded, pro-active and driven by changes and new challenges. Furthermore, it is essential that you have knowledge and experience with several of the following:

- C and C ++. as well as other languages
- One or more real-time operating systems such as VxWorks, Linux (OE), FreeRTOS
- One or more wireless technologies such as ZigBee, zwave, Wifi
- Understanding processes, including elements such as continuous integration, automated testing and configuration management

We look forward to hearing from you
